

Notes:

Make sure that the PCB grounds do not touch the inside of the case and isolate the TO-220 voltage regulators from the end panels of the case with silicone insulators and use plastic isolators on the metal screws.

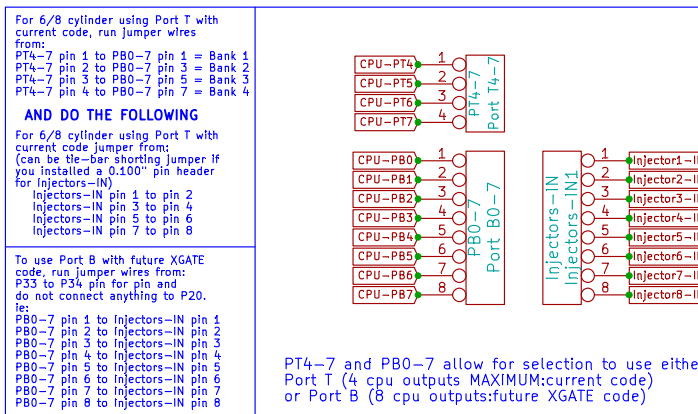

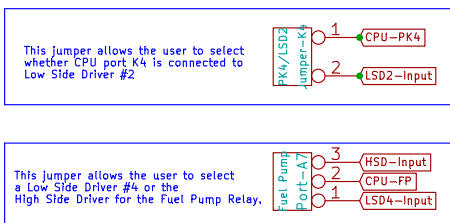

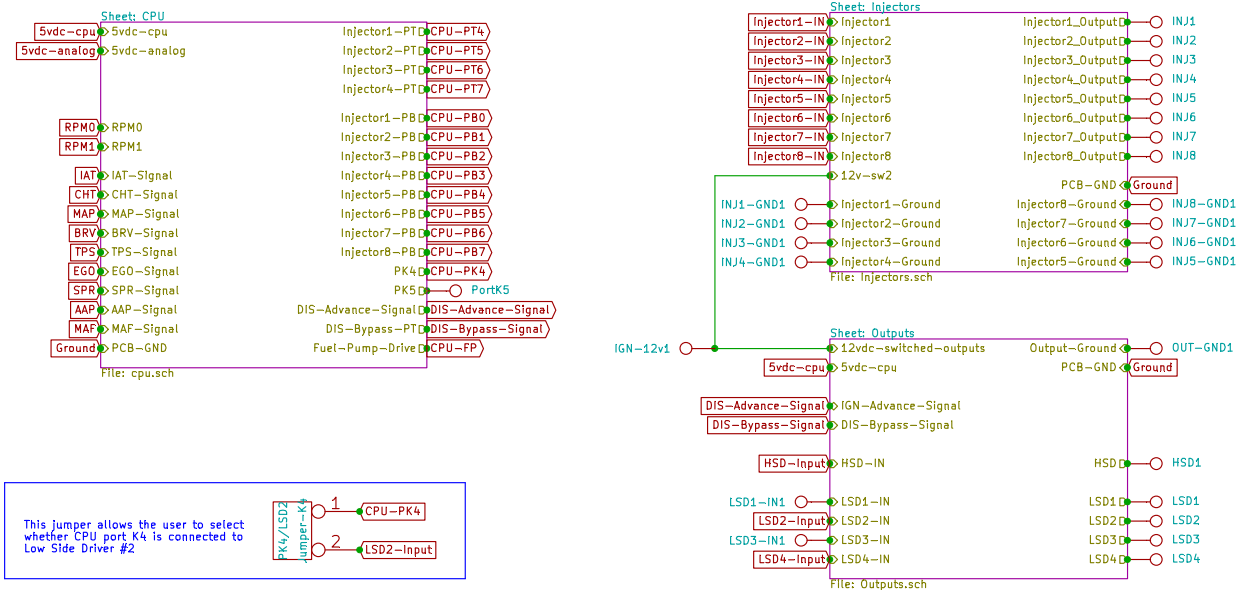

5vdc-cpu = VDD

5vdc-analog = VCC

Components that are missing from design changes:

C45, C46, C50, R62, R86, R93, R94, R96, R97, R98, R99

This PCB is intended to be used with either the specified Context Engineering enclosure or retro-fitted into a factory ECU enclosure.

For GM DIS and Ford EDIS connect RPM0-IN- and RPM1-IN- to ground.
For Ford EDIS do not connect RPM1-IN+ to anything, it isn't needed unless you have a cam sensor for semi-sequential or sequential injection. R16, R17, C25, R10, R12 and D5 are not needed for the EDIS system.

R20 and 23 are only to be used with VR Inputs, do not populate these components for GM DIS or Ford EDIS systems.

NOTE: MAX9926 should be configured as Mode A2 for both VR and Hall/Opto/Digital Inputs.

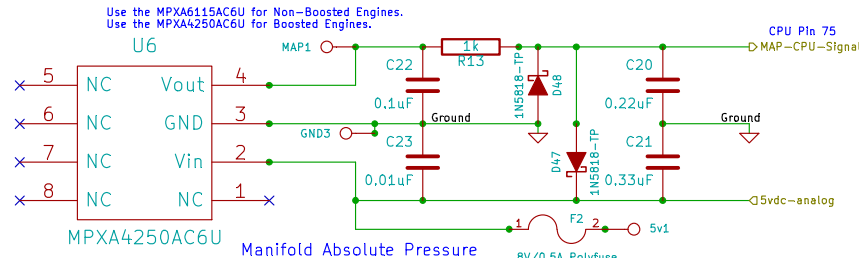

RPM0-IN- and RPM1-IN- should be held at 2.5vdc for Hall/Opto/Digital inputs. R16, R84, R19 and R83 accomplish this by setting up a voltage divider circuit.

For VR Inputs, R18, R19, R16 and R17 need to be 10k resistors.

Crankshaft and Camshaft Inputs

Ambient Absolute Pressure

Manifold Absolute Pressure

Use the MPXA6115AC6U for Non-Boosted Engines.
Use the MPXA4250AC6U for Boosted Engines.

R24, R25 and R31 (2.49k) can be replaced if using sensors other than GM temperature sensors: For FORD Sensors: use 27.4k 0.1% Metal Film resistors; for MOPAR Sensors: use 9.1k 0.1% Metal Film resistors or use 2.45k 0.1% Metal Film resistors (best for most cases). Be sure to use FreeTherm to adjust the values in the FreeEMS code for the best accuracy regardless of which value resistors you use!

Spare ADC Input

Intake Air Temperature

Coolant/Head Temperature

Throttle Position Sensor

Mass Air Flow Sensor

Exhaust Oxygen Sensor

Battery Reference Voltage

D47 and D48 are only populated if you are using an external MAP sensor. Do not populate these locations if you are using the on-board sensor.

Do not populate C23 and C21 if you are using an external MAP sensor.

Change R13 value from 1k to 470 ohm if you are using an external MAP sensor.

C14, C15, C16 and C17 are 50v X7R Ceramic capacitors.
 C12 and C13 are 35v Tantalum capacitors.
 C18 and C19 are 10v Tantalum capacitors.
